

## Fuel Pressure Gauge / Nitrous Adapter

The GOLD fitting goes into the side marked with a 28!

### Installation:

Relieve the fuel pressure on your fuel system. Make sure you are installing in the supply side as opposed to the return.

While wearing eye protection with a rag in hand, cut your fuel line in the location of your choice. Slide the supplied clamps on the rubber hose, install the adapter and tighten the clamps.

### Notes and Warnings:

When installing accessories in the ports use a liquid Teflon sealant or Teflon tape on the accessory threads.

If a port is not going to be used apply a Teflon sealer before installing the plug. Note the gold plug goes into the side stamped with a 28.

After installation is complete, turn the key on to build fuel pressure and carefully check all the ports for leaks. Double check for any leaks after driving.
